

UVMAXX

CROSSARM & HARDWARE SYSTEM

DURABILITY.
PROTECTION.
PERFORMANCE.

The new UVMAXX Crossarm lineup sets the industry standard in durability and delivers the longest life product in its category.

We have maximized every element of our foam core cross arm to meet all standards in lab testing and the real world.

DURAFORCE

The unique Duraforce composite fiberglass design increases rigidity resulting in 45% less deflection and a longer lifecycle than our competition.

DURALOC

Our Duraloc endcaps mechanically lock into the beam vs. the use of foamcore fill to attach endcaps. This mechanical locking system greatly reduces endcap failures.

DURACORE

The Duracore beam incorporates UV protective layers into the structure ensuring that there are no entry points for degradation. While painted systems allow degradation to occur if nicked or scratched, our Duracore beam is resilient and eliminates the need for painting.

KEY FEATURES

- Our best-in-class Duracast mounting hardware system outperforms welded solutions eliminating the chance of premature failure due to poor welds
- Field drillable design
- Lighter, safer, stronger, and more environmentally friendly than wood solutions

Maximum Protection
Outer Veil for the ultimate UV protection

Maximum Longevity
UV inhibitors through all layers of fiberglass core ensure unparalleled service life

Maximum Performance
Polyester composition adds rigidity resulting in 45% better deflection than other brands and reduces weight 25-80% over wood

Radial corners are safer for linemen and improve rigidity to reduce deflection over our competition

Maximum Strength
Fiberglass mat provides beam rigidity and strength to dramatically reduce load deflection

Maximum Usability
High density closed cell foam guards against pest ingress allowing for field drilling without the need for inserts
